Project Name: CHRIS (California Historical Resources Information System)	
OCIO Project #:	Concept
Department: Parks and Recreation	_
Revision Date:	Statement

Description

Brief description of the proposed project:

The CHRIS is a statewide system for managing information on the full range of historical resources identified in California. It is composed of OHP, the SHRC, and twelve regional Information Centers (ICs). Each IC manages historical resources records and reports for one of the 12 regions. This system is operated under the authority of the OHP, the State Historic Preservation Officer (SHPO), and the SHRC, with input from the public, historic preservation professionals, and various agencies.

Need Statement

High Level Capabilities Needed:

Federal mandate requires that the OHP maintains an accurate inventory of historical resource information. In fulfilling this obligation, the OHP performs a vital public service by providing access to historical resource information to the public and to local, state, and federal agencies and other entities. The availability of up-to-date historical resources information saves time and money, and provides both an increased amount of certainty as to the potential impacts associated with a project and better protection of the state's irreplaceable historic treasures.

What is Driving This Need?

Federal mandate requires that the OHP maintains an accurate inventory of historical resource information. In fulfilling this obligation, the OHP performs a vital public service by providing access to historical resource information to the public and to local, state, and federal agencies and other entities. The availability of up-to-date historical resources information saves time and money, and provides both an increased amount of certainty as to the potential impacts associated with a project and better protection of the state's irreplaceable historic treasures.

Risk to the Organization if This Work is Not Done:

If this project is not complete, the State's inventory of historical resources will be at risk.
